Education

Lyceum of Subic Bay College - Bachelor of Science in Information Technology

2023-2027

Projects

Atlas: Smart AI Fitness Personalization and Visual Nutrition Analysis Platform

Nov 2025 – Mar 2026

Solo Full-Stack Developer

- Architected a multi-modal nutrition engine featuring manual logging, UPC barcode scanning, and Computer Vision-based macro estimation using the Gemini Vision API.
- Engineered an AI-driven workout synthesizer that automates personalized training programs based on user biometrics while maintaining support for manual routine building.
- Developed a social ecosystem and marketplace featuring a peer-matching "Buddy Finder" algorithm and a digital storefront for professional coaching services.
- Implemented real-time fitness analytics and a hydration tracking system to provide users with a comprehensive, data-driven view of their physiological progress.

AccuracyLab: 3D Zombie Survival & Gamified Typing Reaction Trainer

Dec 2025 – Mar 2026

Solo Full-Stack Developer

- Developed a high-performance 3D hybrid training platform designed to synchronize keyboard typing and mouse-aiming mechanics.
- Integrated complex 3D assets by implementing a custom GLTF/GLB loading pipeline, optimizing mesh geometry and texture maps for performant web-based rendering.
- Architected a global competitive ecosystem including real-time leaderboards and an achievement engine to drive user retention and engagement through gamification.

Velocity: Vehicle Rental Management System & Real-Time Booking Platform

Feb 2026

Solo Full-Stack Developer

- Real-Time Data Architecture: Architected a NoSQL database schema using Firebase to handle synchronized data streams for user reservations, vehicle inventory, and status updates.
- Responsive User Interface: Built a seamless, dual-interface dashboard using React and TypeScript to provide intuitive workflows for both administrative fleet management and customer reservations.
- Performance Optimization: Integrated database indexing strategies and efficient query logic, slashing data retrieval times and ensuring a low-latency experience for high-traffic booking periods.

Special Interest

- AI-Driven Application Development: Engineering intelligent systems that leverage Generative AI and Computer Vision to automate complex user tasks.
- Full-Stack Web & Mobile Architecture: Designing responsive, cross-platform environments using modern frameworks like React, TypeScript, and Expo.
- API Design & Integration: Orchestrating multi-source data flows by integrating diverse third-party APIs into seamless user experiences.
- Improved system performance and scalability by applying database indexing strategies, ensuring faster analytical queries for large agricultural datasets.

TECH STACKS

Frontend: React, Vite, HTML, CSS

Backend & Framework: Laravel, Node.js

Developer Tools: Github, Expo Go, VsCode, Vercel, Figma

Databases: Firebase, Supabase
